Project Title: CoUPon

Description: CoUPon is a website that aims to provide information about student organizations in University of the Philippines Diliman. Student organizations can add description about their organization, as well as showcase some of the activities they do.

Any UPD student who visits the site can sign up in the organization of their choice. Their information will be sent to the respective orgs for contact details.

Context Diagram:

Entities:

- **Organization**
 - The student organization provides information about their org as well as activities they want to showcase. The organization will also receive the data for future references from students who are interested to join the organization.
- **Student**
 - Any UPD student can visit the site and view the details about the organization they are interested in. Should they wish to apply, they can fill out the form so that the organization can contact them should the application process begin.
- **Moderator**
 - At the start of this project we, the software engineers, will be the moderators of the website. Moderators monitor the website to ensure that all information shown agrees with the rules and regulations of the university. The moderators are also the ones who the organizations will be in contact with should they wish to modify the information on the website.

Major Inputs:

- **Org description**
 - Members of the organization send to the moderator descriptions about their org, including name, short description, mission, vision, "tambayan" location, contact details, and more.
 - The moderator verifies that the received information complies with UP's rules and regulations.

After that, the moderators update the website with new information.

- Application form
 - If a student wants to apply for an org, they can fill out an application form that will ask for their name, student number, course, email address, and other contact details.

Major Outputs:

- Org profile
 - The org's description from the input is displayed on the site where students can view them.
- Database of applicants' details
 - A compilation of student applicants of the corresponding organization and the personal information the applicants have provided in the application form.

Major Functionalities:

- Display list of organizations
- View org profile
 - When an organization is clicked, a panel shows up with the organization's details, including name, short description, mission, vision, "tambayan" location, contact details, and more.
- Send applicant's details
 - The panel also has a sign up form where students can submit their name, student number, course, email address, and other contact details.
- Store applicant's details and display to org
 - All submissions are stored in a database and displayed to the respective org so that they can keep track of who are interested to apply.
